The Institute for Advanced Studies and Research (IIFA) is an organic unit of the University of Évora, active since 2009. Its mission is to promote the integration of teaching and research at the highest level within the University (3°cycle), seeking the creation of the best conditions and the highest quality standards essential to attract to the University more and ever better students. It aims at being the vehicle for a strong dynamics, contributing to the promotion of a scientific culture adequate to the development of the University and to its indispensable outwards projection, in particular in the region in which it is integrated and on an international scale. IIFA is progressing towards: 1) being a genuine Doctoral School 2) helping in a professional way, its Units and Research Centers in the very important tasks involved in the development, growth and internationalization of the University.

For the first objective above and like in other Doctoral Schools in European Universities, IIFA promotes, supports and helps organize all procedures associated with the graduate courses being offered, in matters related to operation, accreditation and student integration. It also intends to initiate a stronger interaction of the students with each other, in order to create conditions to foster a true School spirit and culture. One way to achieve this is through the creation of "transversal" courses to be taken by all students, regardless of their Ph.D.topic. As for the second objective, IIFA wants to help stimulate the internationalization of the graduate education and the research being offered by the University, supporting new initiatives and collaborations (projects and programs in partnership) and researchers interchange; it will make itself available to its different Units and Research Centers to help them in their development particularly with the rise of their incomes, through the establishment of an internal unit dedicated to science and intellectual property management and access facilitation to financing programs (regional, national and european) and the all-important contacts and interaction with industry; it will also seek synergies between the graduate education offer and all the existing scientific capacities at the level of the Units and Research Centers and also seek to contribute to the rationalization and organization of the use of existing scientific infrastructures which can be shared between Units and Centers.

The objectives, actions and topics mentioned in this brief note have in the background IIFA's will to be a substantial part of the University's growth efforts, through the increase of its attractiveness for future students. In particular in what concerns future job opportunities, in a country which cannot dispense having in its development, a cultural and economic activity requiring its people to be educated at the highest level. This will be, at the same time, the way to progressively integrate the University and its advanced, graduated, education into the orbit of the best Universities, in Portugal, in the European Union and in the rest of the World.

The Dean, Professor Manuel Collares Pereira
